

CARDIOLOGY GRAND ROUNDS

Subclinical Arterial Disease: Imaging, Genetics and Behavior

Valentin Fuster, MD, PhD

Physician-in-Chief, Mount Sinai Hospital

Director, Mount Sinai Heart

February 1, 2019, 12:00 p.m.

Denton A. Cooley Auditorium
Room C060

Recent advances in the management of heart failure has led to a shift in understanding of optimal management, including newer drugs and the means by which they are administered and monitored. This lecture will review recent guideline updates, newer data supporting the recent changes, and emerging data regarding understanding of mechanism of benefit from novel heart failure therapies.

At the conclusion of this conference, participants should be able to:

- Explain how the trend in the cardiovascular field is a “movement” from treating disease to promoting health.
- Identify how sub-clinical (imaging and genetics) identification of disease is the present target, as an intermediary of the above trend.
- Define the specific data of such evolution and its impact on promoting health can be achieved.

Texas Heart Institute is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to provide continuing medical education for physicians.

Texas Heart Institute designates this live activity for a maximum of *1.0 AMA PRA Category 1 Credits™*. Physicians should claim only the credit commensurate with the extent of their participation in the activity.
